

SPRAYSTORE

BAC 250 Airless Spray Machine

The BAC 250 is the latest addition to the Spraystore family of products. A 25thou (max) airless piston and a robust construction make it ideal for the professional decorator.

The ability to support a 25thou (max) tip sets this machine apart. Emulsion is generally sprayed through a 17thou tip so there is plenty in reserve resulting in less strain on the motor, giving extended motor life.

The wet end utilises a triple life packing system meaning less downtime and reduced servicing costs, whilst the machine is packed with extras which makes this the professional users ultimate airless machine.

Power and performance for the professional decorator

LCD Digital screen

The LCD digital screen keeps you informed of the pressure and is easily adjusted. The machine is 110v UK certified and CE approved so it can be used on a building site or in a domestic environment with a transformer.

On board tool box

This machine looks good as well as offering superb performance, the adjustable chrome frame carries the hose and cable neatly stored and the on board tool box can carry all the bits and pieces you need on the job.

Q-TECH Gun

The Q-TECH four fingered gun is smooth and gives ultimate control, it comes with 15 metres of hose.

Technical specifications:

- Motor type: 1300w
- Max pressure 3000psi
