

**SPEED, EFFICIENCY AND ULTIMATE PERFORMANCE WITH THE NEW
AIRLESS SPRAY MACHINE FROM SPRAYSTORE**

Brewers' specialist spray division, Spraystore, has announced the latest addition to their family of products, the BAC 250 Airless Spray Machine.

The new BAC 250 Airless Spray Machine features a 25thou (max) airless piston and a robust construction, making it ideal for the professional decorator. As emulsion is generally sprayed through a 17thou tip on other models, there is plenty in reserve resulting in less strain on the motor and an extended life.

The wet end utilises a triple life packing system meaning less downtime and reduced servicing costs, whilst the machine is packed with extras which makes this the professional users' ultimate airless machine including an LCD digital screen, which keeps the user informed of the pressure; a Q-Tech four fingered gun for smooth and ultimate control; and 15 metres of hose with spring ends for extended durability.

The 110v UK certified and CE approved machine can be used on a building site or in a domestic environment with a transformer offering complete flexibility. The adjustable chrome frame enables the hose and cable to be neatly stored away and the on board tool box means all tools can be kept close to hand.

Brewers' Commercial Director, Stan Adams commented: "Spraystore is always striving to introduce new and innovative spray equipment which will enable our customers to do a better job and increase their productivity. The BAC 250 offers professional decorators a superb performance with many invaluable benefits and is the perfect addition to our current line up of Spraystore products, helping to consolidate our expertise and provision of equipment in this ever expanding field".

Other features include solid tyres; triple filter system (gun, manifold and intake), spare filter and adjustment tool; ultra quiet operation; and low maintenance

Demonstration centres are located in Brighton, Exeter, King's Lynn, Lewisham, Poole, Surbiton and Wokingham.
